

UNIVERSAL MOUNTING

Technical Advisory

Tree Installation

Find new installation positions not previously considered because of damage to the tree with the exclusive Tree Strap™ UPM.

A long-lasting nylon strap attaches to the tree without the use of invasive mounting screws. The fully adjustable strap is mold and mildew resistant and allows for tree growth through periodic movement in the strap's position.

A stainless steel safety cable (*optional in some configurations*) maintains UPM's position when the nylon strap is disengaged.
