UPM 

KNOCKOUT

UPM's patented* NPT knockouts reveal a concealed threaded hub for clean installation of surface conduits. An integral, high temperature 'O' ring ensures a watertight seal.

As easily as they pop out, the patented* knockouts can be reinserted. With the ingenuity of an integral, silicone 'O' Ring, replaced knockouts retain UPM's watertight seal.

* U.S. Patent Number 6,940,012 B2

All UPM's feature these exclusive Patented Knockouts. Machined from copper-free aluminum, each knockout covers a 1/2" or 3/4" NPT female conduit entry. A high temperature silicone 'O' Ring creates a hermetic seal between the knockout and the UPM body, which is re-established if the knockout is re-inserted after removal.
