

B-K Fixture Cleaning Instructions:

B-K Lighting fixtures are engineered with high-quality materials and finishes designed to withstand the demands of outdoor environments and perform reliably for decades. Exposure to weather, airborne contaminants, and environmental conditions can gradually affect the appearance of exterior surfaces, so routine inspection and cleaning are recommended to preserve the fixture's original design intent. Regular maintenance helps maintain both performance and aesthetics; however, all cleaning and washing should be performed carefully and in accordance with the guidelines below to avoid damaging finishes, seals, or components.

IMPORTANT: Failure to clean according to the specific instructions below WILL void the fixture's warranty. For question, please contact the factory.

GENERAL CLEANING INSTRUCTIONS

- Use a diluted mixture of mild soap and warm water
- Gently wipe the surface with a clean, soft cloth or sponge
- Rinse with clean filtered water
- Dry with a clean soft towel

DO NOT USE

- Abrasive cleaners of any kind
- Harsh chemical cleaners with bleach, ammonia, acetone, petroleum-based products, or harsh detergents

PRESSURE WASHING

Pressure washing should be avoided as it carries a higher risk of damage to finishes and seals.
